TRANSPORTATION ENGINEERING SEMINAR

Economic Appraisal of Certain Highway Projects in India

by

Dr. S.L. Dhingra
Department of Civil Engineering
I.I.T. (Bombay)
India

Date: Wednesday, June 17, 1992

Time: 4:00-5:00 p.m.

Location: F231 Civil Engineering Conference Room

For further information, please contact S.C. Wirasinghe at 220-7180

Seminar Talk
on

"Economic Evaluation & Analysis of Highway
Improvement Schemes"

by

DR. S.L. DHINGRA

at

Civil Engineering Department

I I T, POWAI Bombay

CONTENTS

1. Introduction
 - 1.1 HDM & its limitations
 2. Development of Highway Investment Analysis
and Evaluation Model (HIAEM or HIEAM)
 - 2.1 Highway characteristics
 - 2.1.1 Road Length
 - 2.1.2 Roughness
 - 2.2 Construction Period & Design Period
 - 2.3 Alternatives
 - 2.4 Traffic & its growth
 - 2.5 Speeds, speed flow equation & Future speeds for
different alternatives
 3. Construction & maintenance costs
 4. Vehicle operating costs
 5. Total Highway costs
 6. Calculation of IRR & Marginal Analysis
 7. Case Studies .
- Results and Conclusions .

WIDTH OF PAVEMENT

The existing width of pavement of all the schemes considered under the study have two lanes and all the equations have been developed based on it.

ROUGHNESS OF SURFACE

The project roads have at present a black topped carriageway. The pavements in most of the reaches are deficient due to large axle load repetitions and hence roughness of the surface is of the order of 6000 mm per kilometre.

VERTICAL PROFILE OF THE ROAD

The fuel and tyre costs are dependent inter-alia on the rise and fall of the road. The average rise and fall assumed in the analysis for various terrain conditions are as follows:

<u>Terrain</u>	<u>Rise & Fall (metres/km)</u>
Plain	10
Rolling	20
Hilly	40

When the roads are improved (widening of carriageway and or strengthening), the roughness drops down from 6000 to 2000 mm/km immediately after strengthening. However, the roughness gradually increases with the passage of traffic and time till a renewal of the surface is carried out. This cycle adopted for analysis is as detailed in Table 3.

TABLE 3 10

<u>Year</u>	<u>Roughness mm/km</u>
(year of opening after improvement)	2000
1	2500
2	3000
3	4000
4 (year when renewal of surface is done)	5000
5 and so on	2000

THE TRAFFIC FORECAST

An attempt was made to study the various economic and consumption characteristics of the regions in which the projects are located. The study encompasses the following parameters:

- Population
- Motor vehicle registration
- - Diesel consumption
- GNP/GDP
- Index of industrial growth
- Index of agricultural production

Rate of growth of each of the above parameters established and are tabulated in Table 4.

TABLE 4. ¹¹ GROWTH RATE OF SELECTED ECONOMIC INDICATORS

Economic Factors

Sl. No.	State	Population	Motor vehicle population	Truck population	GNP/GDP	Industrial Production	Agricultural Production	Diesel consumption
1.	West Bengal	2.11	10.10	4.72	2.60	0.79	2.66	10.60
2.	Gujarat	2.48	11.58	4.21	4.17	2.47	2.71	NA
3.	Uttar Pradesh	2.31	11.70	4.89	2.81	4.76	2.17	NA
4.	Punjab	2.12	26.13	17.63	5.06	13.29	5.07	1.40
5.	Haryana	2.58	11.31	14.25	5.35	8.83	3.36	16.60
6.	Maharashtra	2.23	10.12	4.82	5.51	NA	7.50	NA
7.	Andhra Pradesh	2.14	12.29	10.89	3.30	7.80	2.20	NA
8.	Tamil Nadu	1.61	7.95	7.87	3.37	6.21	0.80	NA

The schemes taken up for the present study are:

- (1) Construction of new four-lane access controlled expressway from Calcutta to Palsit in the State of West Bengal (Durgapur Expressway)
- (2) Construction of a new four lane access controlled expressway from Ahmedabad to Vadodara in Gujarat State
- (3) Construction of a new bridge and approaches across Ganga at Varanasi on National Highway (Varanasi bypass) in the State of Uttar Pradesh
- (4) Widening to 4 lanes of National Highway No. 1 in the section Khanna to Jalandhar in the Punjab State
- (5) Widening to 4 lanes of National Highway No. 1 in the section Murthal-Karnal in the State of Haryana
- (6) Strengthening the existing two lane carriageway of National Highway No. 3 in Bombay-Nasik section in the State of Maharashtra
- (7) Strengthening the existing 2 lane carriageway of National Highway No. 7 in Hyderabad-Kurnool (km 22 to 120) and Hyderabad-Nagpur Section (km 390-440) in Andhra Pradesh.
- (8) Strengthening the existing two lane carriageway of National Highway No. 45 in Madras-Dindigul section (km 28 to 160) in Tamil Nadu Dindigul

A map showing the project roads is at Fig. 4.3

ENGINEERING STANDARDS

The design features and design standards envisaged for all the eight projects are given in Table 5.¹²

The flow chart for economic evaluation & analysis model is given in Fig. 4.

The components of road user cost for different projects are presented in figure 5.

The results of economic analysis further are given in Table 14.

T-9

TABLE 12. SERIAL NUMBER OF SCHEMES (CORRESPONDING TO PARA 5.14.5)

Design features	Unit	1	2	4	5	6	7	8					
Length of Project	Km												
Terrain		Flat	Flat	Flat	Flat	Flat	Flat	Flat

W—Widening
S—Strengthening

ECONOMIC EVALUATION MODEL1. Road Length

Road length of each section is specified correct upto one decimal in km.

2. Terrain

Terrain of each section is specified as under:-

	<u>Rise/fall (m/km), RF</u>
Plain	10
Rolling	20
Hilly	40

3. Present Traffic data

The average daily traffic (ADT) for a specified year (YP) is given. ADT includes fast and slow moving vehicles.

The composition of fast traffic is given as under:-

(4 types)

Cars	:	ADTC
Buses	:	ADTB
Trucks	:	ADTT
2-wheelers	:	ADTTW.

4. Roughness (RG)

The roughness of the present road is assumed as 6000 mm/km. (RG₀).

The roughness of the new road (RG₁RG₅) will be as under:-

,2/-

<u>Year</u>	<u>Roughness mm/km.</u>
Year of opening YOP	2000
YOP + 1	3000
YOP + 2	4000
YOP + 3	5000

YOP + 4	2000
YOP + 5	3000
:	
:	
:	
:	
:	
I/	
and so on repetitively.	

5. Traffic growth rate (r) for all vehicle types

1. Can be uniform growth rate/and constant for the full design period which can be varied for different analysis.

$r = 0 \text{ to } 25$

2. Can be varying for each vehicle type, and can vary over the design period.

$r = 0 \text{ to } 25$

6. Start of construction

1985

7. Alternatives to be considered

6 alternatives are possible :

<u>Alternative No.</u>	<u>Specification.</u>
N ₀	Do nothing
N ₁	Strengthening two lanes plus four laning later when found necessary.
N ₂	Widening to four lanes.
N ₃	four lane expressway
N ₄	Two lane expressway
N ₅	Two lane bypass.

8. Capacity norms (CAP)

	ADT
Plain terrain	7500
Rolling	5500
Hilly	2500

If projected traffic of Alt N₁ exceeds CAP, the widening of road to four lanes will be taken up in that year.

9. Period of construction (CP)

Alt N ₁	3 or 4 Years (i.e. 1985,1986, 1987 and 1988) will be specified.
Alt N ₂	4 Years
Alt N ₃ , N ₄ , N ₅	5 Years (i.e. 1985,1986,1987, 1988 and 1989)

Year of opening to traffic (YOP) is 1985+CP.

10. Existing speeds

Existing speeds of four categories (cars, buses, trucks and two wheelers) will be specified in km/hr, correct up to one decimal.

11. Speed-flow Equations.

HV = Hourly volume.
= 0.1 ADT.

Plain-terrain - Two lanes (Alternative No. and N,
(N₁ till widening to four lanes).

Cars: V_C = 57.88 - 0.0128 HV

Buses : V_B = 56.93 - 0.0132 HV

Trucks: V_T = 49.37 - 0.0097 HV.

Plain terrain - Four lane (Alt. N₂ and N₁ after widening to four lanes)

V_C = 60.00 - 0.00345 HV

V_B = 58.00 - 0.00212 HV

V_C = 50.00 - 0.00152 HV.

Plain Terrain - Four lane Expressway (Alt. N)

3

V_C = 65.00 - 0.00345 HV

V_B = 60.00 - 0.00212 HV

V_C = 55.00 - 0.00152 HV

Pl

.....5/-

Plain terrain - two-lane Expressway (Alt. N_4 & N_5)

V_C	=	60.00 - 0.00345 HV
V_B	=	58.00 - 0.00212 HV
V_T	=	50.00 - 0.00152 HV.

Rolling Terrain- Two lanes(Alt. No. and N_1 (N_1 till widening to four lanes))

Cars V_C	=	52.40 - 0.0098 HV
Buses V_B	=	51.38 - 0.01499 HV
Trucks V_T	=	48.73 - 0.01638 HV

Rolling terrain + Four lane (Alt. N_2 and N_1 after widening to four lanes)

V_C	=	55.00 - 0.00345 HV
V_P	=	53.00 - 0.00212 HV
V_T	=	50.00 - 0.00152 HV

Hilly terrain - Two lanes.(Alt. N_0 and N_1 (N_1 till widening to four lanes))

V_C	=	35.00 - 0.01 HV
V_B	=	33.00 - 0.01 HV
V_T	=	30.00 - 0.01 HV

.....6/-

Hilly Terrain - Four lanes

(Alt N₂ and N₁ after widening to four lanes)

$$\frac{V}{C} = 40 - 0.005 HV$$

$$V_B = 38 - 0.005 HV$$

$$V_T = 35 - 0.005 HV$$

For all conditions, $V_{TW} = 0.6 V_C$

12. Cost of construction. (C in Lakh rupees)

C is given for Alt N₁, N₂, N₃, N₄, and N₅

C for N₀ = 0

Break-up of cost over design period is as under:

Year	Alt N ₁ (CP=3)	Alt N ₂	Alt. N ₃ , N ₄ and N ₅
1985	0.15 C	0.05 C	0.05 C
1986	0.40 C	0.20 C	0.15 C
1987	0.45 C	0.35 C	0.25 C
1988	--	0.40 C	0.30 C
1989	--	--	0.25 C

13. Cost of maintenance (in lakh rupees) per Km.

.....7/-

Cost of Maintenance

Year	Alt No, N ₁ till widening to four lanes and N ₅	Alt N ₄	Alt N after widen - ing to four lanes and N ₂	Alt N ₃
YOP	0.1	0.15	0.2	0.3
YOP+1	0.1	0.15	0.2	0.3
YOP+2	0.1	0.15	0.2	0.3
YOP+3	0.1	0.15	0.2	0.3
YOP+4	1.25	1.25	2.5	2.6
YOP+5	0.1	0.15	0.2	0.3

and so on repetitively.

14. Design period

15 years after opening to traffic.

When comparing two alternatives, the same terminal year is considered, i.e, 2004.

All traffic, roughness, speeds, and costs are to be projected till the year 2004 and tabulated for each year.

15. Fuel costs (FC is Rs. lakhs per year)

$$\text{Cars: } \frac{ADTC + ADTTW}{5} \times \frac{\text{length} \times 365 \times 3.40}{1000 \times 100,000} \times \left(10.31 + \frac{1675.52}{V} + 0.0133 V^2 + 0.0006 RG + 0.180 RF \right)$$

$$\text{Buses : } \frac{ADTB \times 365 \times 2.80 \times \text{length} \times \left(14.49 + \frac{3904.64}{V} + 0.0207V^2 + 0.0012 RG + 0.776 RF \right)}{1,000 \times 100,000}$$

.....8/-

Truck : $ADTT \times 365 \times 2.37 \times \text{length} \times \frac{(32.16 + \frac{3904.64}{V} + 0.0207 V^2 + 0.0012 RG + 0.776 RF)}{V}$

To be calculated for each year after YOP till 2004

16. Spare parts cost (SPC) in Rs. lakhs per year

Cars : SP = -15.86 + 0.0062 RG, subject to a minimum of 3.

$$SPC = \frac{SP}{100} \times (ADTC + ADTTW) \times \frac{\text{length} \times 365 \times 0.6}{100,000}$$

Buses (1.8753 + 0.007373 RF + 0.0000723 RG)

SP=e

$$SPC = \frac{SP}{100} \times \frac{ADTB \times \text{length}}{100,000} \times 365 \times 1.5 \times 0.6$$

Trucks

(1.7119 + 0.0001431 RG)

SP = e

$$SPC = \frac{SP}{100} \times \frac{ADTT \times \text{length}}{100,000} \times 365 \times 1.5 \times 0.6$$

Calculate SPC for each year for cars buses and trucks and add using respective ADT_s, and RG_s

17. Maintenance Labour cost is R_s lakhs per year

$$= SPC \text{ of cars } \times 0.5498$$

$$+ SPC \text{ of buses } \times 0.4027 + SPC \text{ of trucks } \times 0.3692$$

Calculate for each year.

18. Tyre costs (TC) in Rs. lakhs per year

$$\text{Cars } TC = \frac{(ADTC + ADTTW)}{5} \times 365 \times \text{length}$$

$$\times \frac{4 \times 710 \times 0.727 \times 0.54}{100,000}$$

$$(47340 - 2.63 RG) \times 100,000$$

Buses.

$$TC = \frac{ADTB \times 365 \times \text{length} \times 6 \times 3100 \times 0.727 \times 0.54}{100,000 \times (40215 - 361 \text{ RF} - 1.227 \text{ RG})}$$

Trucks

$$TC = \frac{ADTT \times 365 \times \text{length} \times 6 \times 4200 \times 4200 \times 0.727 \times 0.54}{100,000 (48113 - 367.8 \text{ RF} - 1.016 \text{ RG})}$$

Calculate and add

TC of cars, buses and trucks for each year.

19. Fixed costs (Rs. lakhs per year)

Buses

$$\text{fixed cost} = \frac{\text{length} \times ADTB \times 18.94 \times 365}{VB \times 100,000}$$

Trucks

$$\text{Fixed cost} = \frac{\text{length} \times ADTT \times 40.69 \times 365}{V_T \times 100,000}$$

Calculate and add for each year.

20. Commodity costs (in Rs. lakhs per year)

$$\text{Commodity cost} = \frac{3.00 \times ADTT \times \text{length} \times 365}{VT \times 100,000}$$

Calculate for each year.

21. Crew costs

Buses.

$$\text{Crew Costs} = \frac{136 \times 1.25 \times 365 \times \text{length} \times ADTB}{(27.52 + 8.011 V_B) \times 100,000}$$

Trucks

$$\text{Crew costs} = \frac{56 \times 1.25 \times 365 \times \text{length} \times ADTT}{(53.59 + 5.1637 VT) \times 100,000}$$

22. Depreciation costs in Rs. lakhs per annum.Buses

$$\text{Dep. cost} = \frac{0.0059 \times 3,16,250 \times 0.6 \times \text{length} \times 365 \times \text{ADTB}}{(27.52 + 8.011 V_B)} \times 365 \times 0.856 \times 100,000$$

Trucks

$$\text{Dept. cost} = \frac{0.059 \times 2,50,000 \times 0.6 \times \text{length} \times 365 \times \text{ADTT}}{(53.39 + 5.163 V_T)} \times 365 \times 0.624 \times 100,000$$

Add for buses and trucks and calculate for each year.

23. Travel time cost of passengers in Rs. lakhs per annum.

$$\text{Cost} = \frac{\text{Length} \times 365}{100,000} \left(\frac{8.21 \times 4.5 \times \text{ADTC}}{V_C} + \frac{4.49 \times 43 \times \text{ADTB}}{V_B} + \frac{8.21 \times 1.5 \times \text{ADTTW}}{V_T} \right)$$

24. Congestion effect

When ADP \geq 1.0 capacity, multiply fuel cost, tyre cost, spare parts cost and maintenance labour in each year by

Cars	1.54
buses	1.28
trucks	1.31

25. Calculation of IRR

Assume discount rate of 5 per cent per annum. Discount all highway costs (-Ve) and all benefits (Difference between user costs in the two alternatives) to the base year (1985).

$$\text{If } B_0 > C_0$$

take discount rate 5 + 1 and proceed in the same way with increments of 1 % till

$$B_0 \leq C_0$$

Suppose the discount rate then is d .

Take a discount rate of $(d-1) + 0.1$

If $B_0 > C_0$, take a discount rate of $(d-1) + 0.2$ and proceed in the same way with increments of 0.1 % till

$$B_0 < C_0$$

Let the decimal value then be d_1

(for example $d_1 = 0.8$)

$$\text{Then I.R.R.} = (d-1) + d_1 - 0.05$$

- Calculate IRR for two cases:
1. All road user costs
 2. All road user costs except bus passenger time savings.

26. Marginal analysis

Let the first set of alternatives considered be N_0 and N_1 . Tabulate the stream of costs and benefits for each year. Tabulate the stream of costs and benefits of the alternatives N_0 and N_j for each year. Take the difference between the costs and benefits of the two streams for each year. Calculate I.R.R.

27. First year Rate of Return

Total the highway costs of the two alternatives N_0 and N_1 till the YOP. Find the difference in user costs (benefits) in the year YOP. The ratio of first year benefits to the costs is F.Y.R. expressed as a percentage.

28. Tabulation and print outs

(1) give print - outs of stream of discounted costs and benefits for $(d-1) + d_1$ and $(d + 1) + (d_1 - 0.1)$ in the following forms:

	Costs	benefits.
1985		
1986		
⋮		
⋮		
⋮		
⋮		
⋮		
2004	_____	_____
Total	_____	_____

(2) Tabulate annual benefits without discounting for each analysis as follows:-

<u>Component</u>	1985	19862004.
1. Fuel			
2. Spare parts			
3. Maintenance Labour			
4. Tyres			
5. Fixed costs			
6. Crew costs			
7. Commodity cost			
8. Depreciation.			

Total of 1 - 8			
9. Travel time of passenger			

Total 1-9.
