

Waves and Structures

Dr. M C Deo
I. I. T. Bombay

I am happy to present to you this courseware titled: Waves and Structures. It would be of benefit to undergraduate as well as postgraduate students learning courses titled: Mechanics of Water Waves, Marine Structures as well as Introduction to Offshore Engineering. Professionals requiring an exposure to these topics could also benefit from it. It has been prepared keeping an average Master's degree student at the IIT in mind and gives information by avoiding unnecessary lengthy discussions.

The Curriculum Development Cell of IIT Bombay had provided financial support for the preparation of this courseware and I express my thanks for the same. Thanks are also due to the students and staff who helped in typing the manuscript as well as in drawing figures.

The current version of the courseware is only a first edition and will be updated and revised periodically. Any feedback on this work is welcome.
