Abstract

The bstract of this document. More features like sub section, foot note, enumerate, itemize are covered.

1   Inroduction

This is an introduction section and introduces the subject, just like any other document.

2   Advantages of Latex

The features like subsection, sub-subsection, are shown in this document.

2.1   Separation of content and style

Not the most obvious advantage, possibly because a lot of Word users don't understand why this so beneficial.

2.2   Portability

Latex portability comes in multiple ways.

1. An actual latex file is merely a text file.
2. The Latex system that processes the text file.
3. The default output file format for dvi.

2.3   Flexibility

You can get Latex to do just about anything you can think of!

2.4 Control

Even with simple documents, you can quickly become frustrated by Word's rather unintelligent interference for large documents.

2.5 Output

It's difficult to disagree that the output from Latex is far superior to what Word can produce.

2.6 Scalability

In my personal experience, using Word for documents with more than 50 pages has not been a pleasant experience.

2.7 Stability

One of the reasons why perhaps so many people struggle with Word when creating large documents, is because it is prone to crashes.

2.8 Cost

Well, this is one area where Latex wins hands down, since it is free!

2.8.1 Free

That means you dont have to use pirated software. But this is any example of sub-sub section. The last will be praragraph as below.

An example of paragraph Here new paragraph starts.
